

Applying new finish to floors he just stripped

Homeowner happy with DIY project

Four square feet in eight minutes; removing the rubber backing, the original varnish & having 100% clean wood that is ready for finishing.

Removing old and ugly finish from a beautiful cedar deck.

STAR 10

PAINT STRIPPER
THAT WORKS!

HOW to make your floors **BEAUTIFUL** again!

**REMOVING OLD FINISHES FROM DOORS,
CABINETS, HARDWOOD FLOORS &
ANYTHING INSIDE WITHOUT USING
WATER**

1. Apply Star 10 'Phase 1 Paste' the thickness of a dime (1/16th of an inch).
2. Let it dwell for 30 minutes.
3. Check (1 inch square) with a scraper to see if the finish has softened the finish to the bare wood.
4. If yes, scrape/remove the softened finish from the wood surface.
5. If no, let it dwell another 15 to 30 minutes & check again. Remember the dwell time when completing the rest of the project.
6. Keep in mind that all finishes require different dwell times. Some two part finishes may require 7 - 8 hours to dwell.
7. After removing the bulk of the softened finish you will have a small amount of residue on the wood to remove to 100% clean wood, metal or fiberglass.
8. To remove the last bit of residue, use 'Star 10 Phase 2 Liquid'. Using a trigger spray HDPE plastic bottle, apply the 'Phase 2 Liquid' so the surface is completely wet & onto a maroon scotch-brite pad. Agitate/massage the residue with the maroon scotch-brite pad until the surface is clean. Wipe with an absorbent rag, like a terry cloth towel, before it evaporates. You can put a new finish on the surface now.

Star 10 'Phase 2 Liquid' is the same as the Star 10 'Phase 1 Paste' without the thickening agent.

BUY A QUART & DO A TEST!

No Sanding - No Dust - No Loss of Wood

No Methylene Chloride, No Caustics, No Acids, No NMP

A retired couple wanted their floors refinished. They stripped the living room and dining room (16' x 30'), removing the old finish from their home in Harrisburg, PA.
